MEDIALIVE INTERACTIVE
AUTOMATION IN THE OPERATING ROOM
Anesthesia Information System

TAMPA, Fla. – MediaLive Interactive ♦ Tampa – MediaLive Interactive has successfully collaborated with Anestix Solutions to design and develop a cloud based solution allowing them to record, track, report and export complex surgical anesthesia data. Their original process involved manually recording several data points and then back filling the data into an antiquated terminal based system for reporting, a process that was both redundant, inefficient and time extremely consuming. Our solution allows them to collect data in real time which increases their proficiency, saving time and money.

###
